ALL MEDIA POST ADDS NUCODA TO ITS ARSENAL

Burbank, October 19, 2009: All Media Post (AMP) has added Digital Vision's Nucoda color grading and assembly system to its range of services. Digital Vision has been a major player in the color grading arena for more than twenty years.

Digital Vision provides innovative image restoration, enhancement, color correction and data conforming systems that major movie studios, television networks and post production facilities use to master and deliver feature films, TV programs and commercials.

"Adding the Nucoda to our service offerings was really an easy decision," says Alfonso Sanchez, AMP president. He went on to say, "The power and versatility of this system represent the kind of toolset our finishing clients are looking for. Plus the ease with which RED One and other large files can be assembled, manipulated and graded gives us a strong advantage in the digital intermediate side of our business."

All Media Post (AMP) is a full service High-Def/Standard Definition post production facility providing a complete range of post services including picture assembly, digital intermediates, 5.1 mixing, transfers, duplication and syndication packages.

AMP works with every client to create a post-production package that fits each unique project and budget. A complete description of services, credit lists, as well as photos of the environment are available at www.allmediapost.com
